

CCO

CCO

- Use the CCO menu to query SMUs, Service Packs, and Release Software information on various IOS-XR platforms and releases.
- To exclude certain platforms and releases from displaying under the CCO menu, go to Tools – User Preferences to indicate that.

- To download files, select the files and click Action – Download to Server Repository. The selected files will first be downloaded to the CSM Server internal repository, then uploaded to the selected server repository. A green check icon is displayed on the Status column if the file exists in the CSM Server internal repository.
- The Optimal filter removes superseded SMU/Service Packs.
- The yellow highlights indicate the files are posted within the last 7 days.
