## Non-Admin Tools

## **Tools Menu**

### List Hosts

Displays all managed hosts with their connection information. To make changes, click the host name of interest.

### Edit User

Modifies the current user authentication and other information.

### Validate Software

Validates the provided software packages by determining if there is any missing pre-requisites.

### User Preferences

- Excludes certain platforms from displaying on the CCO menu.
- Defines Cisco authentication. The authentication is needed for software download.

## Validate Software

## Validate Software

Software Package List

Paste the software package names below and click the green arrow to validate.

asr9k-px-4.2.3.CSCut52232.pie asr9k-px-4.2.3.CSCuo95165.pie asr9k-px-4.2.3.CSCur33931.pie

Click 'Accept' to include all missing pre-requisites, minus any supersedes if any. Click 'Accept excludes Unrecognized' to exclude entries marked as unrecognized if any. Entries classified as SMU/SP/Package will be included automatically.

asr9k-px-4.2.3.CSCug38659.pie (A Missing Pre-requisite) asr9k-px-4.2.3.CSCum69972.pie (A Missing Pre-requisite) asr9k-px-4.2.3.CSCue19326.pie (A Missing Pre-requisite) asr9k-px-4.2.3.CSCui33805.pie (A Missing Pre-requisite) asr9k-px-4.2.3.CSCut52232.pie (SMU/SP) asr9k-px-4.2.3.CSCuo95165.pie (SMU/SP) asr9k-px-4.2.3.CSCur33931.pie (SMU/SP)

 Provide a software package list (SMU or SP) using the following methods

- Entering them manually
- Selecting from a server repository
- Selecting from CCO
- The SMU or SP names provided can be in different formats so long as the platform and release are identifiable.
- Click the green arrow icon to validate the list.
- If there is any missing pre-requisites or superseded packages, a information dialog will be displayed.

Cancel

Accept excludes Unrecognized

# User Preferences

### **User Preferences**

- Excludes certain platforms and releases from displaying on the CCO menu.
- Defines the CCO authentication information.
