## Non-Admin Tools

## **Tools Menu**

### List Hosts

Displays all managed hosts with their connection information. To make changes, click the host name of interest.

### Edit User

Modifies the current user authentication and other information.

### Validate Software

Validates the provided software packages by determining if there is any missing pre-requisites.

### User Preferences

- Excludes certain platforms from displaying on the CCO menu.
- Defines Cisco authentication. The authentication is needed for software download.

## Validate Software

## **Validate Software**

Click 'Accept' to include all missing pre-requisites, minus any supersedes if any.

Click 'Accept excludes Unrecognized' to exclude entries marked as unrecognized if any.

Entries classified as SMU/SP/Package will be included automatically.

asr9k-px-4.3.1.CSCug87873.pie (A Missing Pre-requisite) - Support TE link Extended Admin Group and higher SRLG scale asr9k-px-4.3.1.CSCun74284.pie (A Missing Pre-requisite) - qos\_ea and qos\_ma consume high CPU in 4.3 asr9k-px-4.3.1.CSCui38382.pie (A Missing Pre-requisite) - 431 C-SMU1 asr9k-px-4.3.1.CSCut52232.pie (SMU/SP) - Production SMU for SAM post Oct 2015. asr9k-px-4.3.1.CSCul42259.pie (SMU/SP) - XR520:BFD packets getting dropped at NPU in Asr9k for FLEX LSP/MPLS-TP asr9k-px-4.3.1.CSCun09408.pie (SMU/SP) - RTC conf RR not advertising all VPN routes to PE after session flap asr9k-px-4.3.1.CSCug88702.pie (SMU/SP) - Excessive Punt Flow Trap does not police bad actor traffic asr9k-px-4.3.1.CSCuh09480.pie (SMU/SP) - IPv6 ND is broken when MLD is enabled on the interface. asr9k-px-4.3.1.CSCuj55425.pie (SMU/SP) - Chkpt treats current Active node as a Stby node(chkpt\_register fails) asr9k-px-4.3.1.CSCuf77118.pie (SMU/SP) - Serial DS3 - stays up when looped in HDLC - down-when-looped configured asr9k-px-4.3.1.CSCuh55354.pie (SMU/SP) - 4.3.1.CCO: ASR9K POS int with HDLS encap flap when oversubscribe asr9k-px-4.3.1.CSCuh40754.pie (SMU/SP) - Umbrella SMU for CSCug17684, CSCug83539, CSCuh02594

- Provide a software package list (SMUs or SPs) using the following methods
  - Entering them manually
  - Selecting from a server repository
  - Selecting from CCO
- The SMU or SP names provided can be in different formats so long as the platform and release are identifiable.
- Click the validate icon to validate the list.
- If there is any missing pre-requisites or superseded packages, a information dialog will be displayed.
